AOG15I AVIONICS TOOL SET

The EGA Master Avionics set is a highly specialized tool set designed for the maintenance of aircraft electronic and control systems (Avionics), focused on critical situations such as AOG (Aircraft On Ground).

1. AOG means that an aircraft is grounded and unable to fly due to a technical failure. The primary goal of this set is to minimize aircraft downtime, as every hour a plane remains stationary represents a very significant economic loss for the airline.

2. This set is designed to provide a rapid response for a maintenance team, being used primarily by technicians with EASA B2 certification, which covers avionics and electrical systems.
